

Incremental Auction Senior Task Force Report
PJM Interconnection
Members Committee Webinar
November 27, 2017

The Incremental Auction Senior Task Force was created to focus on reviewing the current PJM RPM Incremental Auction process and structure with specific focus on circumstances where PJM is a capacity seller. This group will review excess capacity sale and Incremental Auction practices and discuss whether modifications are required to the PJM Incremental Auction processes.

At the September 20th meeting, stakeholders reviewed the binding voting results in regards to 6 proposed solution packages for [problem statement #1](#). While no package received 50% in favor, the group agreed a consensus could be reached through further discussions and variations of the previously proposed packages. [Voting results can be found here](#). The results were presented at the September MRC and it was agreed upon by the committee to continue working towards a potential consensus.

At the following two meetings on October 31st and November 10th the group discussed and finalized 5 solution packages to be voted a final time. The results will be posted on November 27th and shared at the November 30th meeting and a final report for problem statement #1 will be prepared for the December 7th MRC.

The IASTF also devoted the second half of the November 10th meeting to review education discussions on its [second problem statement](#), involving concerns with the current Replacement Capacity business rules. That work plan is currently on the proposal development stage and is set to finish by early Q1 next year.

Next Meetings: November 30, 2017, December 18, 2017
