Issue Status

Solution Packages Proposed

Target Completion

Q2 2020

Progress Update

The DERS is currently considering two different solution packages for establishing operational guidelines and market rules for Public Distribution Microgrids. PJM staff presented updates to their proposal (Package C, see [here](#)) at the group's February 3, 2020 meeting. PJM staff is in the process of reviewing their proposal to determine if changes need to be made in light of stakeholder input at the last meeting. The IMM has also proposed a solution package (Package B)

Action Requested

Review current packages, and be prepared for a vote. If there are substantive changes to either package following the last meeting, a short teleconference only meeting will be held to review the changes. If there are no changes, or only minor non-substantive changes, a vote will be issued prior to the currently scheduled May 18, 2020 meeting to finalize this item.
