

# DR CP Winter Peak Load Calculation

- As part of the Seasonal Capacity Filing, M&V rules changed for winter from Customer Baseline Load (CBL) to the use of the Winter Peak Load (WPL) and winter Firm Service Level (FSL) metrics.
- The annual nomination is capped at the lower of Peak Load Contribution (PLC) or WPL.
- EKPC found that the addition of the WPL method resulted in a lower nomination for the resource.
- Review existing tariff and manual language to consider exceptions that may be needed to the WPL, M&V method.
