

TO Connection PCLLRW UI Enhancements

Ankit Kharod

Sr. Engineer, Transmission Operations

October 13, 2021

| Action Required | Deadline | Who Is Affected |
|----------------------|---------------------------------|---------------------|
| TO Connection PCLLRW | Q4 2021 Train and Production | Transmission Owners |

- PCLLRW is a sub-tool within the Transmission Owner (TO) Connection tool suite.
- PCLLRW stands for Post-Contingency Local Load Relief Warning and is also a PJM Emergency Procedure. (See [M-13](#))
- PCLLRW serves in the coordination of post-contingency load shed plans, which are part of a shared Operating Plan between PJM and its member TOs, in the mitigation of thermal or voltage based constraints.
- As of May 21, PCLLRW was incorporated, along with Stability Viewer, into the TO Connection tool suite.

Visual Changes

- Light/Dark Theme Alignment
- Improve UI experience for the visually impaired

TO Visibility

- Expanding the visibility of issued PCLLRW in the spirit of being proactive and increasing awareness ahead of time

Filterability

- Enables a parent TO to customize the view by screening for the individual TO

Past Communications

- August 17 PJM Dispatcher Training Subcommittee
 - Presentation can be accessed [here](#)
- September 2 PJM System Operations Subcommittee

Release

- Q4 2021 in Training and Production

- [User guide](#)
 - Pending updates related to the changes
- August 17 PJM Dispatcher Training Subcommittee [presentation](#)
