

# Rappahannock Electric Cooperative (REC)

## 2024 Data Center Forecast

# Modeling Methodology

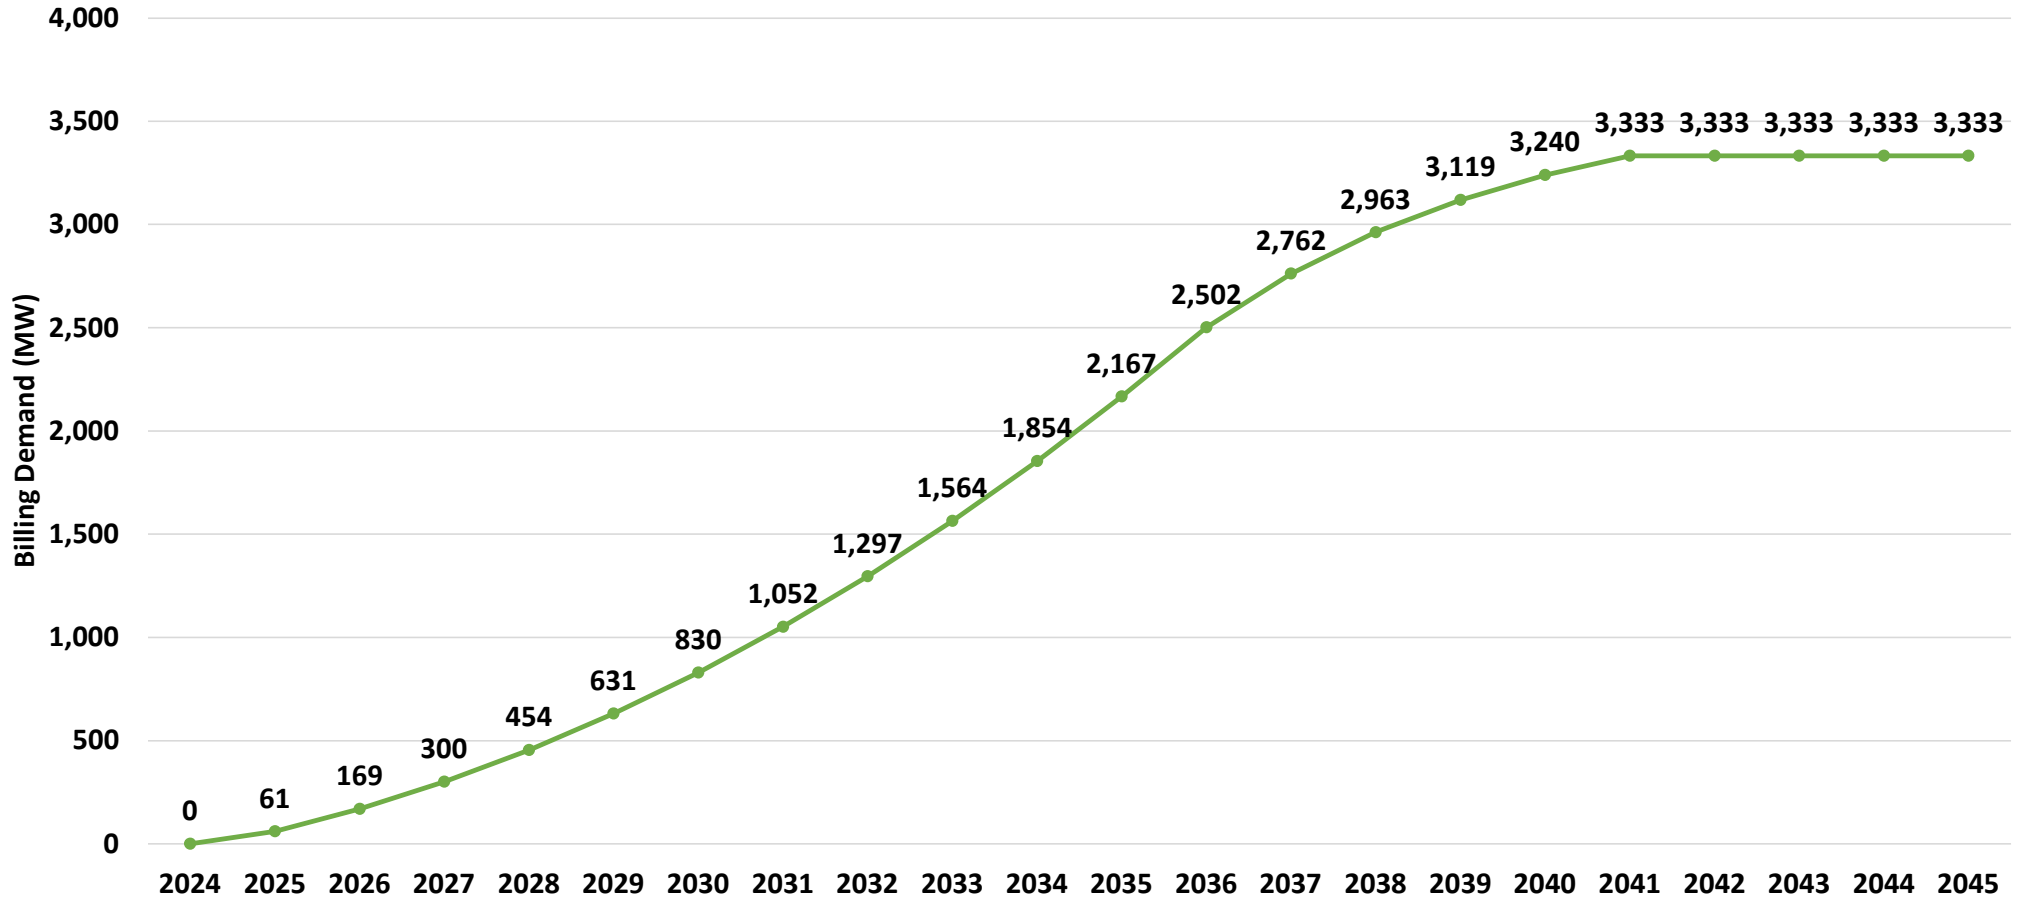

## Considerations:

- There is currently no metered data center load in REC's service territory
- REC requested Dominion Energy Virginia's assistance with the forecast
- The forecast does not assume continued growth in the long-term given the newness of the market. This assumption will be revisited annually.

## Modeling Process:

- Modeled demand curve based on Dominion's aggregate load shape.
- Applied REC and customer provided information to validate curve.
