

Daily Zonal Scaling Factor Polling Results

Market Settlements Subcommittee
October 20, 2015

- Purpose of Poll is to quantify support or objections to design components for further discussion at the MIC
- Responders requested to indicate support of individual design components
- 73 responses received

Question #1: Do you support implementing NSPL data scaling in the same manner that PLC values are scaled in eRPM?

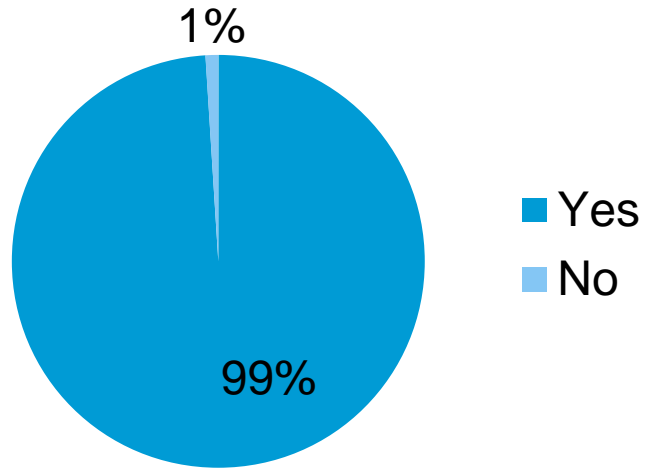

- Not a mandatory requirement to submit unscaled values. Member will still be able to submit scaled values.
- Will require code changes to eRPM

Question #2: Do you support adding a flag to the Daily Zonal Scaling Factors File to identify whether the EDC submits scaled or unscaled NSPL and/or PLC values?

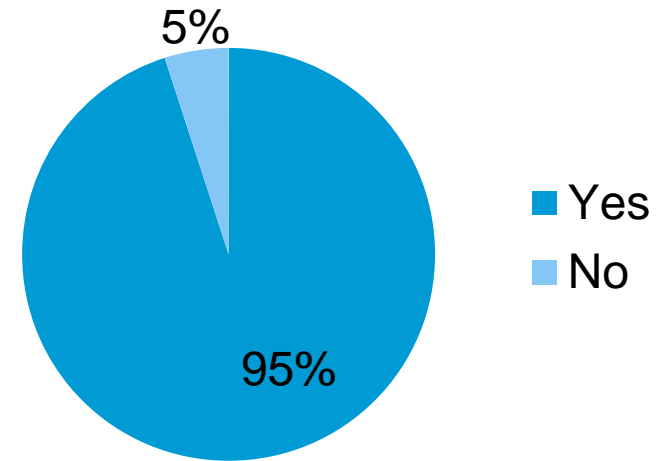

Question #3: Do you support requiring EDCs that submit scaled NSPL and/or PLC values to also submit their internal scaling factors?

- Will require PJM and EDC application code changes

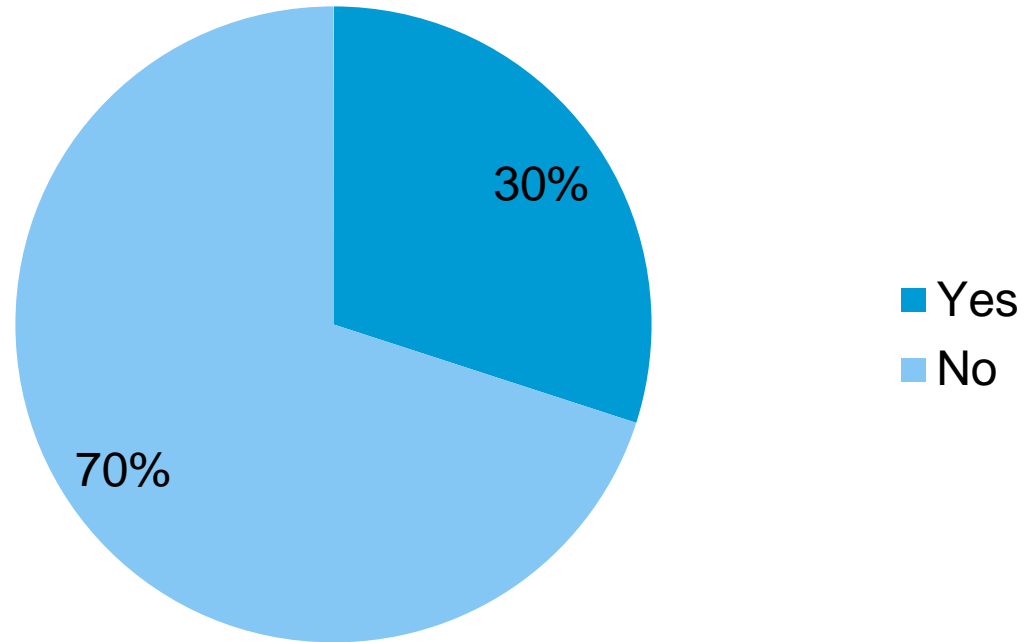

Do you support implementing NSPL data scaling in the same manner that PLC values are scaled in eRPM?

Do you support adding a flag to the Daily Zonal Scaling Factors File to identify whether the EDC submits scaled or unscaled NSPL and/or PLC values?

Do you support requiring EDCs that submit scaled NSPL and/or PLC values to also submit their internal scaling factors?

- Majority support for implementing NSPL data scaling in the same manner that PLC values are scaled in eRPM
 - Timing of implementation in eRPM
- Majority support for adding a flag to the Daily Zonal Scaling Factors File
 - Discuss notification process that EDCs will use in order to correctly report if they submit scaled or unscaled values
