UFE Education and Discussion of Current Practices

February 18, 2016

Market Settlements Subcommittee

- PJM Calculates total EDC/Zone Load based on Ties and Gen as reported to PJM via PowerMeter.

- EDC/Zone orgs calculate the individual LSE Load values to report to PJM via InSchedule.

- There is a natural difference in PowerMeter PJM level data reporting and retail meter level data EDC/Zone orgs collect.
  - UFE

- At a high level, PJM's understanding would be that the EDC/Zone member's allocate the UFE difference across "auction" and/or retail LSEs.
    - Comments from EDC/Zone Members?
- Questions?
