Capital Recovery Factor Equation

Capital Recovery Factors (CRF) are calculated using the equation below:

$$CRF = \frac{r (1 + r)^N \left[1 - \frac{sB}{\sqrt{1 + r}} - s(1 - B)\sqrt{1 + r} \sum_{j=1}^L \frac{m_j}{(1 + r)^j} \right]}{(1 - s) \sqrt{1 + r} [(1 + r)^N - 1]} \dots$$

Formula Symbol	Description
r	After-Tax Weighted Average Cost of Capital (ATWACC)
s	Effective Tax Rate
B	Bonus Depreciation Percent
N	Cost Recovery Period (Years)
L	Lesser of N or 16 (Years)

m_j	Modified Accelerated Cost Recovery System (MACRS) depreciation factor for year $j = 1, 2, \dots, 16$
-------	--

The following assumptions are used in the calculation:

- Current federal tax and depreciation rates as established by U.S. Internal Revenue Service
- The state tax rate is an average of the income tax rates for all the states in the PJM Region
- 50 percent equity for the capital investment necessary to make a unit qualify for Black Start Service
- 50 percent debt for the capital investment necessary to make a unit qualify for Black Start Service
- Debt interest rate based on the most recent Net CONE quadrennial review after-tax weighted average cost of capital (ATWACC) and modified on annual basis by a 200 basis points or greater changes in the Moody Utility Index for bonds rated Baa1
 - This interest rate will be updated during the Net CONE quadrennial review
 - If the 2-year change in the Moody Utility Index for bonds rated Baa1 is more than 200 basis points, this change will be added to the interest rate used in the most recent Net CONE quadrennial review and used for the current year's interest rate
- Debt term equal to the recovery period
- Cost of equity equal to an after tax internal rate of return on equity of 12%

Values Utilized in Calculation of CRF for 2023/2024 Delivery Year
